Version 2025

About us

All Luxury Watches Upgrades in one Place

Based in Miami, FL with over 20 years of experience in hand-setting diamond custom bezels for luxury and designer watches.

Bezels for Watches is an independent manufacturer of custom diamond bezels. We also offer Dial Refinished, Fluted Bezel Recut, Bracelts and Customizations.

All customizations are done at the request of our customers on their own watches—we do not sell watches. We are not affiliated with or authorized by any watch brands, and they do not endorse aftermarket modifications. Our bezels are designed for personal customization and are not intended for resale as branded products.

Address: 111 NE 1st St, Suite 500 Miami, FL 33132

How to Order Instantly

CREATE AN ACCOUNT

[Sign in](#) or [Create an Account](#) to view wholesale prices or place an order.

SEARCH PRODUCTS

Search by reference number, case size, metal type or carat size. 100's of SKUs In-Stock.

EASY CHECKOUT

Simple checkout process & Net terms available for qualifying customers.

QUICK SHIPMENT

In-stock, ready to ship items delivered within 24 business hours.

WHY **QUALITY BEZELS** ARE **IMPORTANT** FOR YOUR **BUSINESS REPUTATION**

Bezel is the ring that surrounds the face of your watch, serving both as a protective guard for the crystal **WATERPROOF OF the WATCH** and as an aesthetic frame for your watch's dial.

Bezels & Bracelets Materials

BEZELS & BRACELETS

Made in Steel or Gold: Yellow, Rose or White. Our Blank Bezels are tube extruded – **never cast**. Once extrusion is made the piece is done in CNC process. The result is a durable, clean and Factory quality to all Bezels easy to install and waterproof. Bezels are sold in 14K, 18K and Stainless Steel

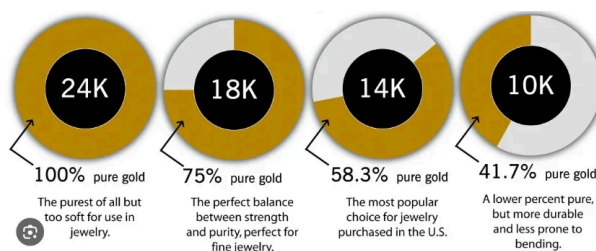

Bracelets are 18K, and Steel as Factory Specifications. Bracelets are also CNC and follow as same links and specifications as Factory.

GOLD K

Gold Chemical Symbol Au is found in nature color yellow. All the variations presented are made on the Alloy level. Gold is a bright yellow metal that is soft, dense, and highly valued. It is often used in jewelry and as a form of currency. Because of its softness and malleability (meaning it can be shaped easily), it is usually mixed with other metals to make it stronger and more durable for use in items like jewelry and coins.

Alloy Metal An alloy is a mixture of two or more metals. These mixtures are made to enhance certain properties, such as strength, durability, or resistance to corrosion, which make the metal more useful than it would be in its pure form.

Gold Karat The karat system is used to denote the purity of gold, with pure gold being 24 karats. The number of karats tells you how many parts out of 24 are gold.

06

Diamond Types

A diamond is a precious gemstone composed almost entirely of carbon, which has crystallized in the isometric crystal system under extreme pressure and temperature deep within the Earth's mantle. Diamonds are renowned for their exceptional hardness and brilliance, making them highly sought after for use in jewelry.

Natural Diamonds

Diamonds are graded and defined by 4c's. The 4Cs of diamonds are a globally accepted standard for evaluating a diamond's quality.

We use Color F-G VS for 18K and Dials and G- H SI for 14K

Lab Grown Diamonds

Lab-grown diamonds, also known as synthetic or cultured diamonds, are diamonds that are created in a controlled laboratory environment, rather than mined from the Earth. We only use this diamonds on pieces MADE TO ORDER - no returns accepted.

Cut

The GIA Cut Scale ranges from Excellent to Poor.

A polished diamond's beauty lies in its complex relationship with light. The magnificent display you see is made up of three attributes: **Brightness** is the combination of all white light reflecting from the surface and interior of a diamond. **Fire** describes the "flares" of color emitted from a diamond. **Scintillation** describes the pattern of light and dark areas and the sparkle you see when the diamond, the light or the observer moves.

A diamond's proportions affect its light performance, which in turn affects its beauty and overall appeal. Diamonds with fine proportions, symmetry, and polish optimize their interaction with light, and have increased brightness, fire and scintillation.

GIA assesses these factors for standard round brilliant diamonds in the D-to-Z color range.

Anatomy of a Diamond

GIA CUT SCALE

VERY GOOD
GOOD
FAIR
POOR

Carat Weight

One carat equals 200 milligrams in weight.

For diamonds under one carat, each carat is divided into 100 points – similar to pennies in a dollar. 0.75 ct. = 75 points, 1/2 ct. = 50 points.

0.50 ct. 0.75 ct. 1.00 ct. 2.00 ct. 5.00 ct.

Beauty and Its Beholder The 4Cs provide a way to objectively compare and evaluate diamonds, but numbers alone can't describe a diamond's mysterious and captivating beauty – for that, you'll have to visit your local jeweler to see one for yourself.

Material extracted from
GIA 4Cs

All trademarks mentioned, including names such as Rolex, Cartier, Omega, etc., are the property of their respective owners. This site is not affiliated with, endorsed by, or authorized by any of these brands. The products offered are third-party replacement parts designed to be compatible.

The GIA Color Scale extends from D (colorless) to Z (light yellow or brown).

Although many people think of gem quality diamonds as colorless, truly colorless diamonds are actually very rare. Most diamonds used in jewelry are nearly colorless with tints of yellow or brown.

Color grades are determined by comparing each diamond to a master set. Each letter grade represents a range of color and is a measure of how noticeable a color is.

Fluorescence Some diamonds can emit a visible light when exposed to ultraviolet radiation, but fluorescence is not a factor in determining color or clarity grades. However, a description of its strength and color is provided on GIA Reports as an additional identifying characteristic.

I ₁
I ₂
I ₃

The GIA Clarity Scale includes eleven clarity grades ranging from Flawless to I₃.

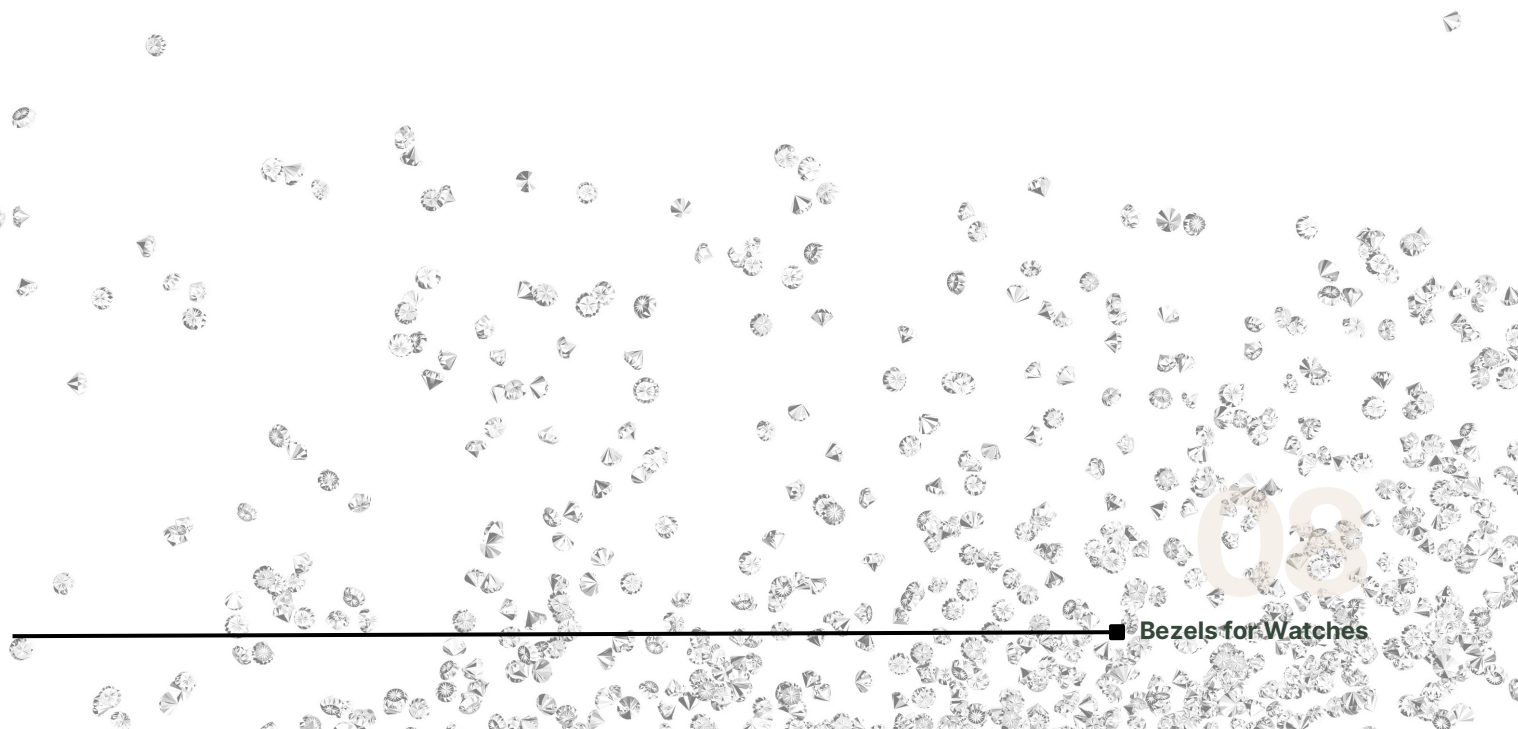

Because diamonds form under tremendous heat and pressure, it is extremely rare to find a diamond that lacks any internal and external characteristics. These characteristics are a by-product of its formation and help gemologists separate natural diamonds from laboratory-grown diamonds, simulants and identify individual stones.

Bezel Setting Types

BEAD SET

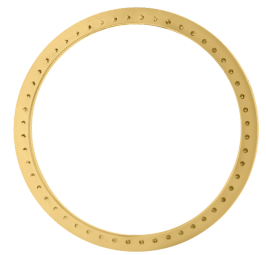

Bead Set or Prong Set: are bezels that are built with prongs that are forced on top of each stone using a setting tool.

Bead Set

Our Bezels Factory Specific Size Bezels have 4 prongs per stone. All other carat sizes are 2 prongs. These are the most popular setting type.

These are our bestsellers, referred to as **FACTORY**

BEAD SET

U Shape or SPV

Setting are bezels that are built with open profiles. This type of setting is not Factory and is preferred by customers that like more sparkle to their watches. Not concern of Factory Styles. MADE TO ORDER

MADE TO ORDER

U SHAPE

CHANNEL

Channel

Setting Stones are held by the sides of the bezel being pressured over stones. This Bezel requires lathe machine and is very labor intensive. These are not in much use anymore.

DIALS

What is a DIAL in Watchmaking?

The dial, also called the watch face, is the front part of a watch that displays the time. It's one of the most important components in terms of aesthetics, readability, and identity.

Main Functions of a Dial:

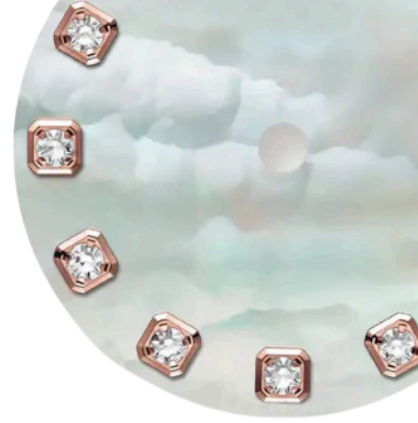

1. Displays time and complications (like date, chronograph, moonphase, etc.)
2. Defines the visual identity of the watch
3. Improves readability

Types and Differences of Dials

MADE TO ORDER

Dials vary by style, material, color, finish, and complications. There are many dial variants within the same model.

All trademarks mentioned, including names such as Rolex, Cartier, Omega, etc., are the property of their respective owners. This site is not affiliated with, endorsed by, or authorized by any of these brands. The products offered are third-party replacement parts designed to be compatible.

Bracelets Guide

The most common Bracelets Types are

We offer a range of signature **bracelets** that not only complement the aesthetics of each timepiece but also define its character and purpose. Among the most iconic are the **Oyster, Jubilee, and President** bracelets. Each of these designs has its own history, construction style, and intended use, from sporty to elegant.

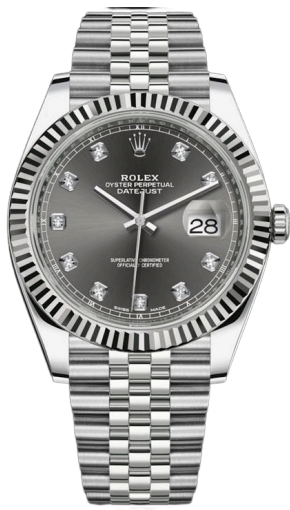

Feature	Oyster	Jubilee	President
Introduced	1930s	1945 (for the Datejust)	1956 (for the Day-Date)
Design	3-piece link (flat)	5-piece link (semi-circular)	3-piece link (semi-circular, refined)
Look	Sporty, robust	Elegant, dressy	Luxurious, exclusive
Materials	Stainless steel, gold, Rolesor	Often in steel, two-tone, or gold	Only in precious metals (gold/platinum)
Use	Submariner, Explorer, Daytona, etc.	Datejust, GMT-Master	Day-Date only
Clasp	Oysterclasp or Oysterlock	Concealed Crownclasp or Oysterclasp	Concealed Crownclasp

Bracelets Guide

The Jubilee bracelet is more elegant and flexible, designed for comfort and classic style.

The Oyster bracelet is Rolex's most rugged and versatile design, used mostly on professional and sports models.

The President bracelet is exclusive to the Day-Date and some high-end Lady-Datejust models, known for its luxurious materials and prestigious look.

Our Services

Bezels for Watch we specialize in providing high-quality watch services tailored to enhance both the performance and appearance of your timepiece. Our skilled technicians work with precision and care, ensuring your watch gets the attention it deserves.

FLUTED BEZEL RECUT

We custom recut your FLUTED bezel to restore its original angles. Whether you're upgrading or restoring, our bezel recuts are clean, precise, and crafted to fit like factory originals.

POLISHING

Bring your watch back to life with our expert polishing service. We carefully restore the shine and finish of your case and bracelet, scratches, dullness, and signs of wear, while preserving the original shape and edges.

FULL OVERHAUL

Our complete overhaul service ensures your watch runs as good as new. It includes:

- Full disassembly of the movement
- Ultrasonic cleaning of all components
- Lubrication and calibration
- Gasket replacement and water-resistance test

Perfect for watches that need mechanical attention or haven't been serviced in several years.

BEZEL INSTALLATION

We install bezels with expert care and precision, whether you're upgrading to a custom bezel or replacing a worn one. Our fitting ensures a perfect seal and alignment, maintaining both aesthetics and function.

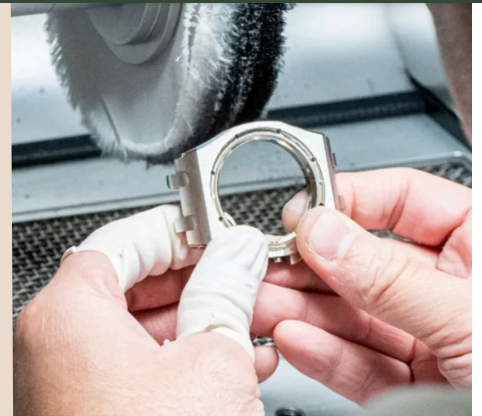

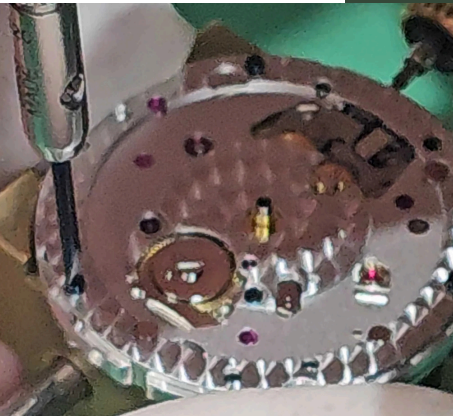

WHY CHOOSE US?

Experienced, detail-oriented watchmakers

High-end tools and equipment

Fast turnaround times

Trusted by collectors and enthusiasts
